

## Universal Serial Bus Cable (USB)

### Description

Universal Serial Bus (USB) 2.0 specification is the most popular cable assembly which brings computer and telecommunication industries together. It can connect up to 127 peripheral devices to computer. Furthermore, it also supports Plug and Play applications at the top-end level of data transmitting speed. Actually, USB Implementers Forum (USB-IF) is approved TIME Interconnect to be a member company (Vendor ID#: 1975) since Year 2001, to ensure the relative technology and quality control can achieve the global standard. Exceptional for standard USB cable, TIME Interconnect is welcome to assist the potential customer to develop cables of USB A to any unique pigtail or registered OEM connector design in non-standard cable application.

### USB 2.0 specification incorporates three speeds

Low-Speed (Sub-channel Cable): Up to 1.5Mbps,

Full-Speed: Up to 12Mbps,

High-Speed (Including USB Mini-A "On-The-Go"): Up to 480Mbps,

### Application

Desktop / Laptop PC, PDA, MP3 Player, 2.5G/3G Mobile Phone, Wi-Fi, Flash Drive, Printer, Modem, Generic Keyboard, Mouse, Scanner, Joystick, Battery Charger and Loudspeaker.
